EYFR02B Quick Set-up Guide

Horizontal Key = Programming (flashing blue light)

Pull and reinsert battery, pull trigger to learn the tool
- – Hold trigger until you get a green light

If it did not learn:

✔ Is the tool off **F** mode?
- – Has to be in a PS (program setting) 1-30 to learn

✔ Is it a Radio Tool?
- – There will be a **R** in the serial # and model #

✔ Are you within Range?
- – Must be within 33 feet

✔ Is the tool stored in another Qualifier?
- – If so remove tool from other Qualifier.

Vertical Key = Ready (solid blue light)

Turn key vertical to use after programming

✔ Note signal strength

✔ Yellow/Green = Very Good

✔ Orange = Good

✔ Red = Poor
- – Check for machine and electronic interference.
- – Try to achieve a clear line of sight
- – Make sure antenna is clear of obstruction
- – Change RF channel (refer to owners manual)

Connection to Device Programmer Software

Use RS232/DB9 USB adapter for programming
- – Download device programming software from **website**.

If it won't connect:

✔ Is it on 9600 baud rate?
- – Check USB device driver baud rate on your PC
- – Check baud rate in device programmer

✔ Is the correct COM port selected?
- – Check COM port in device programmer

✔ Read, adjust settings then write
