Charging Management System

Hardware-agnostic CMS for charging depots

The Panasonic Charging Management System (CMS) helps fleet managers maintain efficient operations and save money when charging. The Panasonic CMS is vendor agnostic, using open standards to work with almost any electric vehicle and charger you choose.

Minimize charging costs for your electric vehicles

Built to support any OCPP compliant charger

Real-time EVSE monitoring and management

Ensure reliability and optimize performance

› Key Features

- **Charging Optimization**
- **Depot Asset Management**
- **Charging Session Management**
- **Reporting**
- **Lower Peak Energy Demand**
- **Alerting**

› Pilot Partnerships

We're looking to partner with US organizations with a strategic need to electrify their fleet.

What's in it for you?
- **Affordable monthly subscription**
- **No long term commitment**

Ideal partners will have:
- **At least 10 electric vehicles**
- **At least 2 level 3 chargers**
- **Regular product feedback to help solve your greatest challenges**

Join Panasonic's Pilot Program

Are you a Fleet Operator looking to quickly get up to speed on how to manage your electric vehicle fleet?

Panasonic works with public and private fleet operators and utilities to simplify operations, educate your team, and save money.

Panasonic

Charge Management Software

that helps navigate the challenges of electrification.

Panasonic's charge management solution streamlines the charging process, ensuring efficient energy management. Our vendor agnostic platform combines data from EV chargers with distributed energy management systems enabling fleet owners to optimize eFleet charging.

Ensure Reliability & Savings

- **Optimize charging schedules** based on vehicle specifications to ensure on-time departure.

- **Charge at the lowest electricity cost** by building a schedule to charge during off peak hours

- **Reduce infrastructure costs** by allowing more vehicles to be charged with a minimum number of chargers.

- **Maximize choice** with open-standards based architecture to ensure interoperability/hardware agnostic.

- **Simplify operations and alignment with utilities** by aggregating charging sites into a single dashboard.
